

Please do not allow Broadband to be carried over power lines. There is too much much noise on the HF bands with the FCC no longer preventing such things to happen. I, like many people, rely on shortwave radio to get news and information. The the resulting qrm, this source of information will be denied to the American people. Please be an agency which will not allow this. The FCC used to be effective. Please do not continue to be known as the "Agency for sale to the highest bidder." Thank you.
